**New hope for treatment of painful adult shingles**  
[www.sciencedaily.com](http://www.sciencedaily.com)

Researchers have discovered a compound with the potential to be more effective than existing agents in treating the very painful blisters known as shingles -- a condition that affects up to 30 percent of Americans, mostly elderly, and for which no specific treatment exists.

In general, the risk to dry AMD patients progressing to wet AMD for any given five-year period is approximately 14% to 20%.<sup>1,2</sup> (See "AMD Background," at the end.) In addition, the risk through five-years for developing wet AMD in the fellow eye is 10% for those whose fellow eye has neither large dru
